FONTCUE — FREE CHECKLIST

Cricut Cut-Readiness Checklist

Run every new font through these checks before you commit a full project to it.

- [ ] **1. Check the license**

  Confirm the font source and license allow your project type, especially if you plan to sell the finished item.

- [ ] **2. Install, then reopen Design Space**

  Install the font on your device, then fully close and reopen Cricut Design Space so it appears in the font list.

- [ ] **3. Test connection points and counters**

  Cut a small test at your real project size. Check that thin strokes, letter joins, and enclosed counters hold together.

- [ ] **4. Weed a test piece before the full project**

  Weed the test cut first. If it tears or tangles, simplify the font or size up before cutting the final piece.
