FONTCUE — FREE CHECKLIST

Print Font Size Cheat Sheet

Poster, t-shirt, signage and mobile size floors, plus the quick legibility test to run before you send a file to print.

☐ **1. Poster sizing**

Headline 50pt+ up close, 100pt+ across a room. Subhead about half the headline size. Body text floor around 24pt. Use the viewing-distance-times-six rule for the headline.

☐ **2. T-shirt sizing**

Main chest-level line at least 1.5 inches tall. Secondary lines down to 0.75 inches. Keep strokes at least 1.5-2pt wide for screen print; bold or semi-bold weights survive both screen print and DTF best.

☐ **3. Mobile and signage sizing**

Mobile body text at least 16px. For signage, multiply viewing distance in feet by 0.035 for letter height in inches, then by 72 for point size. Round up near a threshold.

☐ **4. Script legibility test**

Zoom to actual size, squint from arm's length, print a physical proof at 100 percent scale, then check it from the real viewing distance before you order.
